

Modernize Medicaid Systems

In order to modernize our Medicaid systems we believe that it is imperative that we build a strong foundation to build upon. The foundation is a state-wide Enterprise Architecture that incorporates the following diagram.

Once the foundation is created then we can build out the Medicaid systems. The Enterprise Architecture RFP was awarded to Deloitte and work began on the projection March 1, 2016. The EA is scheduled to be ready to support the eligibility and enrollment in November of 2016. The contractor will be responsible for interfacing with the Fiscal Intermediary (FI) of the Department as well as the Managed Care Organizations on our behalf. Once the EA is stood up we will work on the APIs that will be necessary for transactions to occur. For the most part the transactions will be direct with the FI.
